RE: Smoking Compositions/PM 1080
Your file PM-81-7

Dear George:

Enclosed is a marked copy of the draft disclosure, a copy of the accompanying memo from the inventors, two added examples, some possible alternative names, and the tabulation of odor and smoking properties which should be particularly useful.

On the subject of nomenclature, I am not sure that you were objecting to "quinoxaline" which after all is a variety of pyrazine. If you think it is acceptable, you may return in Examples I, V, and VI to quinoxaline nomenclature which is slightly simpler. Chem. Abstracts-oriented people insist that these should be named as ketones, but we are holding out for acylpyrazine terminology.

I join the inventors in asking whether elemental analyses and past tense would not be desirable. I remain neutral on the title.

Very truly yours,

Les
